

Data used in the IUU Fishing Risk Index are static and the Index is not updated on a rolling basis, but rather every 2-3 years. Iterations of the Index have so far been provided for 2019, 2021, 2023 and 2025. The next complete update of the Index is expected in 2027. Scores for each year are based on data collected during the year prior to the update, but may, for some indicators, be based on data from earlier years. The date of the data used in each indicator to generate a country score, and additional methodological considerations on each indicator, are provided in the methodology paper available at <https://iuufishingindex.net/methodology.pdf>

Although the information and data contained in this file and on the website have been produced with the authors' reasonable efforts and have been compiled from sources believed to be reliable and accurate, no warranty, expressed or implied, is made regarding adequacy, completeness, legality, reliability, accuracy or usefulness of any information. The dataset is intended to be a public information service, and all of the information contained herein is provided on an 'as is' basis. This disclaimer applies to both isolated and aggregate uses of the information and encompasses all warranties of any kind, express or implied. If a section of this disclaimer is determined by any court to be unlawful and/or unenforceable, the other sections of this disclaimer shall continue in full force and effect. Neither the authors' organisations, employees, or sponsors shall be responsible or held liable for any errors or omissions in the contents, nor the improper or incorrect use of the information described or contained in this file or on the website.
